

Analog forestry enriches the soil

by Meindert Brouwer

Grassroot organisation CENDEP in Cameroon successfully assists small farmers in sustainable agriculture. Step by step poor farmers are getting more prosperous, food security increases and pressure on nearby forests becomes less. At present CENDEP is training farmers in analog forestry, a chemical-free way of growing crops which restores ecosystem services and contributes to resilience against climate change. **Wirsiy Eric Fondzenyuy and Perry Ndzefemmegho of CENDEP explain.**

The land has turned green again. Perry Ndzefemmegho, forest and nature conservation officer at CENDEP.
